Nonfunctional Requirements - Group AssA 23

1. The platform shall be able to handle up to 50000 simultaneous users
Tag: Number of Simultaneous Users
Ambition: Handle as many users online as possible
Meter: Simultaneous users are logged in and their response times to actions less than 800 milliseconds for all user requests.
Scale: Number of Concurrent Users
Minimum: 50000
Target: 100000

2. The textbook exchange platform shall ensure readability regardless of device or screen size
Tag: Readability of Text on different screens
Ambition: Ensure that all text is easily readable for all users, regardless of device or screen size
Meter: Number of instances where text is easy to read or appears unclear on different devices or screen sizes in percentage accessed by unbiased IU participants.
Scale: Boolean (Yes/No) in %
Minimum: 90%
Target: 100%

3. The platform shall have a response time of less than 800 milliseconds
Tag: Request processing time
Ambition: The platform shall have high performance and availability for all user requests so that users don't have to wait for long.
Meter: Response time measured from the user request to user receiving a response from the server
Scale: Time
Minimum: 800 milliseconds
Target: 0s

4. The platform shall implement strong encryption measures for shipping and payment information.
Tag: Payment and shipping information encryption and security
Ambition: The system shall have the highest level of security when it comes to payment and shipping information
Meter: Security level of the encryption type measured by the encryption key length used for encrypting user information

Yazdan Zinati - 260928077
Himel Saha - 260847384

Scale: Security level
Minimum: AES-128 security level
Target: AES-256 security level for all user data

5. The platform shall have support for visually impaired users.
Tag: Accessibility for the visually impaired
Ambition: The platform should be accessible for all visually impaired people
Meter: The number of users who use the screen reader or keyboard navigation for accessing the platform
Scale: Number of visually impaired users
Minimum: 90% of visually impaired users
Target: 100% of visually impaired users
